

ATTENTION:

Trail sections will be **CLOSED PERIODICALLY** effective immediately until further notice, due to Restorative Selective Forest Thinning operations underway (see map). Closures are in accordance with active work and may change day by day.

Please adhere to trail closure signs for your own safety.

STAY AT LEAST 300' AWAY FROM ACTIVE LOGGING EQUIPMENT

IMPACTED TRAILS: G1210 & Secret Squirrel

- Please exercise caution when entering the park through Bayview Trailhead on weekdays between the hours of 4am and 4pm.
- Large trucks will haul logs on the G1300 and G1000 leaving the park using the Bayview gate/trailhead three to four times daily.
- Forest thinning is one of many forest restoration tools. Thinning selectively removes a portion of the trees in a densely packed forest to open the canopy. More sunlight will reach the forest floor to facilitate diverse understory plant communities and provide better wildlife habitat. The thinned forest will be set up to grow and develop towards a more diverse and natural ecosystem.
- For more information, please visit www.kitsapgov.com/parks or e-mail parks@kitsap.gov
